Invitation

The Center for Gender in Medicine (GiM) would like to invite you to our second Berlin symposium 'Sex and Gender in Medicine' which is being organised together with the Research Training Group 754 'Sex- and Gender-Specific Mechanisms in Myocardial Hypertrophy'.

One aim of the GiM is to study sex and gender differences in clinical syndromes. Topics are the biological basis of clinical syndromes, the manifestation and course of diseases, prevention, diagnostics and therapy as well as the health care structures.

At this symposium we would like to present contributions on these topics and encourage discussion about their impact on medical research and training in Germany and Europe*.

Latest results of research will be presented in two poster sessions. The best posters will be awarded with a prize.

We would like to discuss with you the findings in order to start an interchange about the situation of and perspectives for gender research in medicine.

We look forward to welcoming you in Berlin.
